DELCOTTO, GREGORY R

ART UNIT

PAPER NUMBER

1796

MAIL DATE

DELIVERY MODE

05/14/2008

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/561,046	Applicant(s) SEKINE ET AL.	
	Examiner Gregory R. Del Cotto	Art Unit 1796	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 December 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3 is/are rejected.
- 7) ☒ Claim(s) 4-7 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-7 are pending.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

Claims 4-7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot be dependent upon another multiple dependent claim. See MPEP § 608.01(n). Accordingly, claims 4-7 not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogino et al (US 4,678,598), Niemiec et al (US 6,495,498), or Wetzal (US 4,885,107), all in view of Watson et al (US 4,136,163).

Ogino et al a liquid shampoo composition containing from 5 to 30% by weight of a surface active agent, from 0.05 to 5% by weight of a skin sensation inducing aromatic chemical such as menthol and camphor, and a modified cyclodextrin. See Abstract. Suitable surfactants include anionic surfactants, etc. See column 3, line 40 to column 4, line 15. The shampoo compositions may also contain any arbitrary ingredients ordinarily incorporated into shampoo compositions such as propylene glycol, glycerine, etc. The remainder of the composition is generally water. See column 6, lines 50-65.

Niemiec et al teach two-in-one detergent compositions comprised of at least one water soluble silicone agent, at least one cationic conditioning agent, and a detergent. The compositions are useful for use in shampoos, baths and shower gels. See Abstract. Suitable detergents include anionic surfactants such as alkyl sulfates, etc. See column 6, lines 40-69. Additionally, the compositions may include a humectant which is present in an amounts from 0.5 to 10% by weight of the composition and include polyols such as glycerine, propylene glycol, etc. See column 13, Lines 1-30. Analgesics such as menthol may also be used in the compositions in amounts from about 0.001 to about 20% by weight. See column 15, line 20 to column 16, line 25.

Wetzel teaches shampoos which comprise a synthetic surfactant, selenium sulfide, a suspending agent, and water. See Abstract. Suitable surfactants include anionic, amphoteric, nonionic, etc. See column 2, lines 5-15. Additionally, the compositions may contain a variety of optional components suitable for rendering such compositions more acceptable. These components include viscosity modifiers such as propylene glycol, etc. These optional components are used individually at a level of from about 0.01% to 10% by weight of the composition. See column 6, lines 40-65. Additionally, menthol may be used in the compositions in amounts of 0.5% by weight. See column 7, lines 35-55 and claim 5.

Ogino et al, Niemiec et al, or Wetzel do not teach the use of a N-substituted-p-menthane-3-carboxamide derivative or a composition containing menthol, a N-substituted-p-menthane-3-carboxamide derivative, an anionic surfactant, a polyhydric alcohol, and the other requisite components of the composition in the specific amounts as recited by the instant claims.

Watson et al teach N-substituted-p-menthane-3-carboxamides which have the property of stimulating the cold receptors of the nervous system of the human body to produce a desirable cold sensation and are used for this purpose in a variety of edible and topical preparations. See Abstract. Watson et al also teach that the N-substituted-p-menthane-3-carboxamides provide a cooling sensation without the disadvantages of menthol, which are a very strong odor and high volatility. See column 2, lines 1-15. Suitable consumer products in which they are used include solutions, emulsions, pastes, etc., for shampoos, hair oils, etc. See column 3, lines 15-55. Note that, the

Art Unit: 1796

Examiner asserts that Watson et al teach N-substituted-p-menthane-3-carboxamides derivatives which are the same as recited by the instant claims. See column 2, lines 27-69 and column 6, lines 40-69.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to use a N-substituted-p-menthane-3-carboxamide derivative in the composition taught by Ogino et al, Niemiec et al, or Wetzels, with a reasonable expectation of success, because Watson et al teach that a N-substituted-p-menthane-3-carboxamide derivative produces a desirable cold sensation in a similar topical cleaning composition.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to formulate a composition containing menthol, a N-substituted-p-menthane-3-carboxamide derivative, an anionic surfactant, a polyhydric alcohol, and the other requisite components of the composition in the specific amounts as recited by the instant claims, with a reasonable expectation of success, because the broad teachings of Ogino et al, Niemiec et al, or Wetzels in combination with Watson et al suggest a composition containing menthol, a N-substituted-p-menthane-3-carboxamide derivative, an anionic surfactant, a polyhydric alcohol, and the other requisite components of the composition in the specific amounts as recited by the instant claims.

Note that, essentially, the prior art teaches the equivalence of menthol to N-substituted-p-menthane-3-carboxamide derivatives as cold sensation agents in personal cleansing compositions; it is prima facie obvious to combine two compositions, each of which is taught by the prior art to be useful for the same purpose, in order to form a third

Art Unit: 1796

compoisiton to be used for the very same purpose...[T]he idea of combining them flows logically from their having been individually taught in the prior art. In re Kerkhoven, 626 F.2d 846, 850, 205 USPQ 1069, 1072 (CCPA 1980). See MPEP 2144.06.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Remaining references cited but not relied upon are considered to be cumulative to or less pertinent than those relied upon or discussed above.

Applicant is reminded that any evidence to be presented in accordance with 37 CFR 1.131 or 1.132 should be submitted before final rejection in order to be considered timely.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory R. Del Cotto whose telephone number is (571) 272-1312. The examiner can normally be reached on Mon. thru Fri. from 8:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on (571) 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
